Who we are

About Stripe

Stripe is a financial infrastructure platform for businesses. Millions of companies—from the world's largest enterprises to the most ambitious startups—use Stripe to accept payments, grow their revenue, and accelerate new business opportunities. Our mission is to increase the GDP of the internet, and we have a staggering amount of work ahead. That means you have an unprecedented

opportunity to put the global economy within everyone's reach while doing the most important work of your career.

About the team

Stripe's Experimentation Platform sits at the heart of how we build products. The platform provides random assignment, metrics computation, rigorous statistical analysis, versatile reports that let every Stripe team ship confidently, learn quickly, and keep users safe. We serve experiments at scale, powering decisions for launches that move trillions of dollars of payments volume. The team is a tight-knit group of engineers who partner closely with data scientists and product thinkers, united by a commitment to correctness, low latency, and developer ergonomics.

What you'll do

We're looking for a Staff Software Engineer who will set the technical direction for the next generation of Stripe's Experimentation Platform—one that is as intuitive for internal users to adopt as it is powerful under the hood. You will architect and build systems that provide easy setup, low-latency results, and statistically sound analysis, all while being simple to integrate, flexible to extend, and ready to scale an order of magnitude beyond today's traffic. You will partner closely with product teams and data scientists to ensure they have a seamless end-to-end experimentation experience—from defining a hypothesis to making a launch decision. Your work will directly influence how quickly and safely Stripe ships every new feature.

Responsibilities

- Define and drive the long-term architecture of Stripe's Experimentation Platform.

Lead multi-quarter, cross-org initiatives that improve reliability, scalability, and statistical rigor of the platform.

Directly contribute to core systems and write code.

Ensure operational excellence and enable a highly available, reliable and secure Experimentation Platform

Partner with engineers and data scientists across the company on experimentation best practices and build a community with an metrics-first & experimentation-first culture.

Who you are

We're looking for someone who meets the minimum requirements to be considered for the role. If you meet these requirements, you are encouraged to apply. The preferred qualifications are a bonus, not a requirement.

Minimum requirements

10+ years of professional software engineering experience, with 3+ years acting as a technical lead for large-scale distributed systems.

Strong understanding of statistical experimentation concepts (A/B testing, power analysis, confidence intervals, multiple-testing corrections)

Proficient in at least one of the modern programming languages (e.g. Java, Ruby, Python, Typescript).

Hands-on experience with stream or batch data processing technologies (Kafka, Flink, Spark, Trino, or equivalent)

Demonstrated ability to partner with data scientists, product managers, and other engineers to translate business questions into reliable technical solutions

Preferred qualifications

Prior ownership of an internal or external experimentation platform

Statistical background from academic or prior working experience as Data scientists.

Hybrid work at Stripe

Office-assigned Stripes spend at least 50% of the time in a given month in their local office or with users. This hits a balance between bringing people together for in-person collaboration and learning from each other, while supporting flexibility about how to do this in a way that makes sense for individuals and their teams.

Pay and benefits

The annual US base salary range for this role is \$224,000 - \$336,000. For sales roles, the range provided is the role's On Target Earnings ("OTE") range, meaning that the range includes both the sales commissions/sales bonuses target and annual base salary for the role. This salary range may be inclusive of several career levels at Stripe and will be narrowed during the interview process based on a number of factors, including the candidate's experience, qualifications, and location. Applicants interested in this role and who are not located in the US may request the annual salary range for their location during the interview process.

Additional benefits for this role may include: equity, company bonus or sales commissions/bonuses; 401(k) plan; medical, dental, and vision benefits; and wellness stipends.

Please find our California applicant personal information notice [here](#).

We look forward to hearing from you

At Stripe, we're looking for people with passion, grit, and integrity. You're encouraged to apply even if your experience doesn't precisely match the job description. Your skills and passion will stand out—and set you apart—especially if your career has taken some extraordinary twists and turns. At Stripe, we welcome diverse perspectives and people who think rigorously and aren't afraid to challenge assumptions. Join us.
